

Multitone i-Message 100

A secure system for growth and development

Multiple messaging methods

i-Message 100 is a cost effective messaging and communication system specifically designed to give smaller organisations, or divisions within a large organisation, the confidence that all messaging and alarm management is monitored and controlled, all with levels of flexibility normally associated with large scale products. i-Message 100 is ideal for a 100 users or more communicating using a combination of voice and data. This gives small to large enterprises the communication reliability that is essential to be effective in business today

Growth as standard

As users, our expectations of, and reliance upon technology has grown so dramatically that we assimilate it's capabilities, almost without question. i-Message 100 allows us to expand and keep-up with the ever changing technology curve as and when your communication budget or strategies allow. i-Message 100 offers a simple upgrade path for organisations who want to focus on working with the most effective communication combined with their own levels of control.

Messaging when it counts

i-Message 100 gives users a sophisticated communication system which doesn't require them to adapt or change the way in which they use their existing communication tools. Your organisation can operate as normal, but with an additional level of sophistication. Phone calls and conversations can be held as standard, but with i-Message 100 anyone can receive a vital message on their device at any time whether it is a smartphone, landline, DECT pager or PC. This allows important messages to be acted upon even if you are busy or on a call.

Consolidation and monitoring

i-Message 100 integrates with numerous internal systems so combines the messaging capabilities of your existing equipment allowing messages to transfer from person to person or machine to machine without investing in a complete company wide system.

Achieving more, working with differing technologies

Being able to combine the messages of a variety of communication systems and devices into one system ensures that your organisation is able to communicate, even when busy. In order to give you the most comprehensive messaging solution i-Message 100 has been designed to integrate with a variety of differing systems and a variety of differing technologies, These include:

- GSM
- WiFi
- On-site and wide area paging
- SMART phones and tablets
- Cordless telephony (DECT, IPDECT)
- Monitoring and alarm systems
- Staff protection systems
- Std PSTN
- Building property management systems

Saving more than money

By using i-Message 100 organisations can immediately connect 100 licensed users onto one comprehensive system with the confidence that vital messages will be directed to the correct person, irrespective of the end device used. This saves precious time during a critical event. With i-Message 100 groups, such as a paging group can be classed as one user licence, so contacting a dedicated group of experts to an emergency situation can be completed with just the touch of a button, saving vital time and money.

Giving confidence

Ensuring that a message gets through, the right people are contacted and the correct instructions are given, received and actioned is important to any business. If that person does not respond, or is unable to respond, then i-Message 100 can contact an alternative contact and / or communication device for the same person.

In addition i-Message 100 offers an auditing system allowing operators to accurately report on the activities and incidents between users, monitoring systems and other property, building or security systems.

These reports offer a full audit trail so should you ever need to report on the sending, delivery and receipt of any message, you are able to do so with the utmost confidence.

Most importantly i-Message 100 is the starting point to a large multi-site enterprise communication hub allowing you to grow and adopt new technologies, devices and interfaces as required.
